Hackathon G.L Bajaj

PROJECT - Synopsis Format

GROUP NAME:- GeekGupta

Project Name: Report Archieve

Project Details/Case Study:

In case of emergency to perform an operation Doctor s have to perform a number of tests which takes a lot of time and so in this application we are actually using the patient previous report which were saved using his aadhar card number. It will make sure that this operation saves time.

For Example : Blood Sugar, E.S.R, LFT, Group and same, HIV-1, AUSTRALIA antigen,Asthma Test.

These all test takes time and are performed separately and from this application we can save this much time by accessing the latest result of that patient.

Technology Used: Android, Firebase, Git, GitHub

No. of Modules: 4

Software Requirement : Android Studio, Git

Specification(SRS) :
   Purpose:

   To Recover Medical report of a patient using his adhaar number in case of emergency

   Scope of Project: Health care

   Requirement:
   Hardware:-
      Laptop

   Software and Tools:

Android Studio, Git, GitHub, Play Store, Firebase

Module Description:

Module 1:   --- Sign In and Log In Module : this module will be for the doctor and the hospital only.

Module 2:. --- Quering the data for the patient.

Module 3 : --- Fetching the Data and populating the View.

Module 4 : ---   Testing Part

Module 5 :

Name & Signature: Gaurav Kumar, Ravi Ranjan
Date:- 17t March 2018
